Requirements Document

Version: 3
Last Updated: 25th October 2026
Project: MPOWERED App
Client: Musculoskeletal Health Australia
Purpose: Formalisation of the agreed and proposed requirements for the MPOWERED App.

---

1. **Purpose and Scope**

Purpose:

The purpose of the MPOWERED App is to support patients in managing their musculoskeletal health journey by providing structured self-assessments, health tracking, appointment preparation and relevant health-management tools. The application aims to help patients better understand their health information, monitor changes over time and feel more prepared and supported when interacting with healthcare practitioners.

Scope:

The current project is primarily patient-focused. The MPOWERED App will support:

- Patient onboarding and secure access.
- Regular self-assessments covering pain, movement, personal care and social health.
- Generation of assessment summaries and health profiles.
- Tracking of pain history, medications, treatments and health-management strategies.
- Preparation for healthcare appointments, including suggested questions and recording relevant consultation information.
- Sharing of relevant health information with healthcare practitioners.
- Invite-based access for carers or support persons.
- Accessibility features such as speech-to-text.
- Support for iPhone, iPad and Android platforms.

---

2. **Functional Requirements**

ID	Functional Requirement	Source	Priority
FR01	The system shall allow patients to	US01 – Enter personal details	Must

	enter their personal details, including name, year of birth and relevant health conditions, during onboarding.		
FR02	The system shall allow patients to authenticate using their phone number and a one-time verification code (OTP).	US02 – Secure phone login	Must
FR03	The system shall display a brief purpose, security and privacy message to the user when entering the application.	Key Feature – Security messaging	Must
FR04	The system shall allow patients to complete a weekly pain assessment, including pain location, characteristics and intensity.	US03 – Complete pain assessment	Must
FR05	The system shall generate and display a summary after the patient completes a pain assessment.	US04 – View assessment summary	Must
FR06	The system shall allow patients to complete a movement assessment, including ability to stay active/mobile.	US05 – Complete movement assessment	Must

FR07a	The system shall allow patients to record how pain affects general daily activities.	US06 – Record personal care impacts	Must
FR07b	The system shall allow patients to record how pain affects personal care (e.g. washing, dressing).	US06 – Record personal care impacts	Must
FR07c	The system shall allow patients to record how pain affects sleep.	US06 – Record personal care impacts	Must
FR08a	The system shall allow patients to record how pain affects their social life and relationships.	US07 – Record social health impacts	Must
FR08b	The system shall allow patients to record how pain affects travel.	US07 – Record social health impacts	Must
FR08c	The system shall allow patients to record how pain affects mood.	US07 – Record social health impacts	Must
FR09	The system must allow edits to be made, and details to be added in terms of self-assessment.	Key Feature – Dynamic assessments	Must
FR010a	The system could allow patients to record medications and vitamins/supplements they are taking.	US08 – Track medications, exercise and management strategies	Could

FR010b	The system could allow patients to record exercise activities undertaken as part of their health management.	US08 – Track medications, exercise and management strategies	Could
FR010c	The system could allow patients to record other health-management strategies not covered above.	US08 – Track medications, exercise and management strategies	Could
FR11	The system shall generate a health profile summarising relevant patient health information and allow the patient to export.	US09 – Generate and export health profile	Must
FR12	The system shall allow patients to view their pain history and trends over time, including pain intensity by location.	US10 – Track pain trends and history	Must
FR13	The system could allow patients to add, edit and delete prescription/supplement information.	US11 – Manage prescriptions	Could
FR14	The system shall allow patients to plan a healthcare appointment by recording the appointment date,	US12 – Plan healthcare appointment	Must

	healthcare practitioner and service type.		
FR15	The system shall generate suggested questions for a healthcare appointment based on the patient's self-assessment information.	US15 – Generate appointment questions	Must
FR16	The system shall generate an appointment summary containing relevant patient health and consultation information.	US17 – Share appointment summary	Must
FR17	The system should allow patients to invite carers or support persons and define their access level (e.g. full visibility, assessment summaries only, or view-only) when granting access.	US13 – Invite and manage carer access	Should
FR18	The system should allow an authorised carer or support person to view and track the patient's shared health journey, limited strictly to the access level granted by the patient in FR17.	US14 – View and track patient's shared journey	Should

3. **Non-Functional / Quality Requirements**

ID	Category	Non-Functional Requirement	Source	Priority
NFR01	Security / Privacy	The system shall protect patients' personal and health information from unauthorised access, including encryption of data at rest and in transit, and shall comply with applicable Australian privacy legislation for health data.	Be – Secure and private; Security/legal considerations	Must
NFR02	Usability	The application shall be easy to understand and use for patients who may experience chronic pain or have limited technical confidence.	Be – Easy to use with chronic pain or limited tech confidence	Must
NFR03	Usability	The application shall clearly distinguish mandatory questions from	Be – Mandatory vs optional questions clearly distinguished	Must

		optional questions throughout the assessment process.		
NFR04	Compatibility/ Portability	The application shall provide a consistent user experience across supported iPhone, iPad and Android devices.	Be – Consistent across iPhone, iPad and Android; Scope – App store access	Must
NFR05	Reliability	The application shall operate reliably during normal use, with a target uptime and acceptable error rate *[specific targets to be confirmed]*, and shall preserve user-entered health information appropriately.	Be – Reliable and available	Must
NFR06	Maintainability / Extensibility	The application architecture should be modular and maintainable so that future features can be added without major	Considerations – Extensibility and ongoing development	Must (for updating minor amendments) Should (for larger updates)

		redevelopment.		
NFR07	Extensibility/ Internationalisation	The application architecture should allow future support for additional languages, although multilingual functionality is not required in the current release.	Key Feature – Language preferences	Should
NFR08	Cost/Sustainability	Technology and infrastructure choices should consider ongoing development, hosting and maintenance costs appropriate for a non-profit organisation.	Considerations – Tech stack and ongoing cost	Should
NFR09	Data Retention/ Compliance	The system shall support appropriate retention and management of patient data in accordance with applicable legal, regulatory and client requirements.	Considerations – Data retention; Security/legal	Must

---

4. **Out of Scope**

ID	Out of Scope/Won't Have	Reason/Source
OS01	A full healthcare practitioner-facing account, dashboard or practitioner-side workflow will not be implemented in the current release.	Scope – Patient-focused first; doctor-side features are a future phase
OS02	Multilingual user-interface functionality will not be implemented in the current release.	Key Feature – Language preferences not needed now; architecture should allow future support
OS03	The development team will not modify the evidence-based assessment questions or the data being captured by those questions.	Scope – Questions and captured data are fixed not dynamic
OS04	The system will not be able to record a healthcare practitioner's responses using text or voice after obtaining consent.	Scope – Given time constraints, recording features are unable to be implemented
OS05	The system will not be able to allow patients to share an appointment or health summary with a healthcare practitioner via a secure, time-limited shareable link that expires after a defined period or number of uses.	Scope – Given time constraints, only an exportable version of health summaries will be available
OS06	The system will not be able to support speech-to-text input for relevant information-entry fields.	Scope – Given time constraints, recording features are unable to be implemented
OS07	The system will not be able to provide prompts encouraging patients to	Scope – Given time constraints, gamification/additional

	remain active and reduce sedentary behaviour.	notifications is unable to be implemented
OS08	The system will not be able to provide access to community or social-support functionality to support patients in managing their health journey.	Scope – Given time constraints, app will be limited to only individual contributions visible

FR05	The system shall generate and display a summary after the patient completes a pain assessment.	US04 – View assessment summary	Must
FR06	The system shall allow patients to complete a movement assessment by recording information about their movement abilities.	US05 – Complete movement assessment	Must
FR07	The system should allow patients to record how pain affects general activities, personal care and sleep.	US06 – Record personal care impacts	Should
FR08	The system should allow patients to record how pain affects their social life,	US07 – Record social health	Should

	travel, mood and relationships.	impacts	
FR09	The system should allow patients to record medications, exercise activities and other health-management strategies.	US08 – Track medications, exercise and management strategies	Should
FR10	The system shall generate a health profile summarising relevant patient health information and allow the patient to export or share it as a PDF.	US09 – Generate and export health profile	Must
FR11	The system shall allow patients to view their pain history and trends over time, including pain intensity by location.	US10 – Track pain trends and history	Must
FR12	The system should allow patients to add, edit and delete prescription information.	US11 – Manage prescriptions	Should
FR13	The system shall allow patients to plan a healthcare appointment by recording the appointment date, healthcare practitioner and service type.	US12 – Plan healthcare appointment	Must
FR14	The system shall generate suggested questions for a healthcare appointment based on the patient's self-assessment information.	US15 – Generate appointment questions	Must
FR15	The system should allow patients to record a healthcare practitioner's responses using text or voice after obtaining consent.	US16 – Record healthcare practitioner's answers	Should
FR16	The system should generate an appointment summary containing relevant patient health and consultation information.	US17 – Share appointment summary	Must

FR17	The system should allow patients to share an appointment or health summary with a healthcare practitioner through a shareable mechanism such as a link.	US17 + Key Feature – Doctor summary sharing	Should
FR18	The system should allow patients to invite carers or support persons and manage the access granted to them.	US13 – Invite and manage carer access	Should
FR19	The system should allow an authorised carer or support person to view and track the patient's shared health journey according to the access granted by the patient.	US14 – View and track patient's shared journey	Should
FR20	The system should support speech-to-text input for relevant information-entry fields.	US18 – Use speech-to-text	Should
FR21	The system should provide prompts encouraging patients to remain active and reduce sedentary behaviour.	US19 – Receive movement prompts	Could
FR22	The system could provide access to community or social-support functionality to support patients in managing their health journey.	US20 – Access community and social support	Could

3. Non-Functional / Quality Requirements

The following non-functional requirements define the quality attributes and constraints of the MPOWERED application, including security, usability, accessibility, compatibility, reliability and maintainability.

ID	Category	Non-Functional Requirement	Source	Priority

NFR01	Security / Privacy	The system shall protect patients' personal and health information from unauthorised access and support appropriate privacy practices for sensitive health data.	Be – Secure and private; Security/legal considerations	**Must**
NFR02	Usability	The application shall be easy to understand and use for patients who may experience chronic pain or have limited technical confidence.	Be – Easy to use with chronic pain or limited tech confidence	**Must**
NFR03	Usability	The application shall clearly distinguish mandatory questions from optional questions throughout the assessment process.	Be – Mandatory vs optional questions clearly distinguished	**Must**
NFR04	Compatibility / Portability	The application shall provide a consistent user experience across supported iPhone, iPad and Android devices.	Be – Consistent across iPhone, iPad and Android; Scope – App store access	**Must**
NFR05	Reliability	The application shall operate reliably during normal use and preserve user-entered health information appropriately.	Be – Reliable and available	**Must**
NFR06	Maintainability / Extensibility	The application architecture should be modular and maintainable so that future features can be added without major redevelopment.	Considerations – Extensibility and ongoing development	**Should**

NFR07	Extensibility / Internationalisation	The application architecture should allow future support for additional languages, although multilingual functionality is not required in the current release.	Key Feature – Language preferences	**Should**
NFR08	Cost / Sustainability	Technology and infrastructure choices should consider ongoing development, hosting and maintenance costs appropriate for a non-profit organisation.	Considerations – Tech stack and ongoing cost	**Should**
NFR09	Data Retention / Compliance	The system shall support appropriate retention and management of patient data in accordance with applicable legal, regulatory and client requirements.	Considerations – Data retention; Security/legal	**Must**

4. Out of Scope / Won't Have

The following items are outside the scope of the current MPOWERED release. They may be considered in future phases but are not committed deliverables for the current project.

ID	Out of Scope / Won't Have	Reason / Source
OS01	A full healthcare practitioner-facing account, dashboard or practitioner-side workflow will not be implemented in the current release.	Scope – Patient-focused first; doctor-side features are a future phase
OS02	Multilingual user-interface functionality will not be implemented in the current release.	Key Feature – Language preferences not needed now; architecture should allow future support
OS03	The development team will not modify the evidence-based assessment questions or the data being captured by those questions.	Scope – Questions and captured data are fixed not dynamic

5. Pending Client Confirmation

The following items require clarification or confirmation from the client before they can be treated as final requirements.

ID	Item to Confirm	Related Requirement	Current Understanding
PC01	What data-retention requirements should apply to patient health information?	NFR09	Retention must follow applicable legal, regulatory and client requirements; the specific retention period is not yet defined.
PC02	What priority should the community / social prescribing feature have for the current release?	FR22	Currently classified as Could, although client notes indicate that community/social support is considered important.
