MPOWERED User Manual

Use MPOWERED to track how you feel each week, prepare for appointments and keep your health information together.

Open the app in your browser:
https://maxliu3616.github.io/musculoskeletal-mpowered/

Get started

If this is your first visit, select **Get started** and follow the prompts to enter your personal details and health conditions. If you already have an account, select **Sign in**.

Enter your Australian mobile number and select **Continue**. Enter the four-digit verification code, then select **Verify**.

Find your way around

Use the menu to move between **Pain Tracker**, **My Health**, **Care Planner** and **Settings**. The menu sits at the bottom on smaller screens and on the left on wider screens.

Complete your weekly check-in

1. Open **Pain Tracker** and choose **Pain**, **Movement**, **Personal care**, **Social health** or **Management**.
2. Answer each question and select **Continue**. At the last question, select **View summary**.
3. Review your answers. The completed assessment is saved to **My Health**. Select **Close** to return to Pain Tracker.

To add a note about your week, select **Reflect on your week**, write your thoughts and select **Save reflection**.

Review your health records

In **My Health**, select **View profile** or **View your profile** to see your assessment summaries. Open **History** to review past check-ins and your pain chart.

Select **Print PDF** on a report to print it or save it as a PDF through your browser. The mobile app also has **Share PDF**.

Plan an appointment

Book your appointment with your healthcare practitioner first. Care Planner helps you prepare; it does not make the booking.

1. Open **Care Planner** and select **Plan appointment**. Enter the agreed date, add the practitioner and service if you wish, then select **Save**.
2. Choose or add up to two support people and select **Save**, or select **Skip**. A name and phone number are required for each person.
3. Select the questions you want to ask and select **Save**. Completed assessments help personalise the suggested questions.
4. Check the plan and select **Save** again. You can reopen it under **My appointments** and use **Modify questions** to change your selection.

Support people are saved with your plan. Adding them does not send an invitation or give them access to the app.

Keep notes during a visit

Open your saved appointment and select **Ask consent for recording answers**. Ask your practitioner to sign, then select **Save**.

Select **Add doctor's answer** beside a question. Type the answer or select **Record answer** and allow microphone access. Select **Stop recording** when finished, then **OK** to save. Recordings are not automatically turned into text.

Add your medication

Go to **My Health**, open **Prescriptions** and select **Add prescription**. Enter the medication name, strength, form, dosage and repeat interval, then select **Save medication**. Use the edit or remove icon beside an existing entry to change it.

Settings and help

Open **Settings** to manage your account and support people. Under **Display**, choose a comfortable text size; the change saves automatically. **Help & Support** has contact options. Select **Log out** when you have finished on a shared device.

If something does not work

No verification code: check your phone number and use **Resend the verification code** when the countdown ends.

A button is unavailable: check that you have answered the question or filled in the required fields.

No health history yet: finish an assessment and open its summary, then return to **My Health**.
